FORTY-EIGHTH ANNUAL REPORT  
OF THE  
BOARD OF SUPERINTENDENCE OF THE  
DUBLIN HOSPITALS,  
WITH  
APPENDICES FOR THE YEAR 1905-6.

---

TO HIS EXCELLENCY THE RIGHT HON. JOHN  
CAMPBELL, EARL OF ABERDEEN, G.C.M.G.

*Lord Lieutenant General and General Governor of Ireland.*

35, Dawson-street,  
11th June, 1906.

MAY IT PLEASE YOUR EXCELLENCY :

We, the Board of Superintendence of the City of Dublin Hospitals, have the honour to submit to Your Excellency this our forty-eighth Annual Report under Statute 19 & 20 Vict. cap. 110, passed on the 29th July, 1856, entitled Dublin Hospitals Regulation Act.

During the year ending 31st March, 1906, we have inspected all the Hospitals which receive grants from Parliament.

These are :—

1. Westmorland Lock Hospital.
2. The House of Industry Hospitals, viz. ;
  - a. Hardwicke Fever Hospital.
  - b. Whitworth Medical Hospital.
  - c. Richmond Surgical Hospital.
3. Steevens's Hospital.
4. Meath Hospital and County Dublin Infirmary.
5. Cork-street Fever Hospital.
6. Rotunda Lying-in Hospital.
7. Coombe Lying-in Hospital.
8. The Royal Victoria Eye and Ear Hospital ; and
9. Royal Hospital for Incurables, which receives a portion of the Concordatum Fund.

On these occasions we made inquiries respecting the current expenses of each hospital, as to the system of purchasing, storing, and issuing supplies. We endeavoured to ascertain if the buildings and drainage were in good order, and the general management was satisfactory, and if due provision was made for the comfort and welfare of the patients.

We have so frequently expressed our views in former Reports on hospital hygiene, ward management, and as to the necessity of invalid cooking, and on the precautions to be taken against an outbreak of fire, &c., that we do not in our present Report advert to these matters in detail.

The management and general conditions of these hospitals have been satisfactory during the year, and we are glad to report that no culpable irregularity on the part of attendants was brought under our notice, nor have we had any serious or well-founded complaint from the patients.

Since the last visit of Your Excellency, as Viceroy to Ireland in 1886, Medicine has, with all other sciences, made marked progress in its different branches, and there are good grounds for the hope that the near future will reveal yet further progress.

The unsolved problems as to the cause of cancerous growths; the recrudescences of diphtheria, small-pox and bubonic plague, still afford a great field of study for the scientific investigator. Even the familiar diseases, measles and scarlatina, have still to be traced to their source. Tuberculosis of the lungs, thanks to the revival of Bodington's treatment, is now to be included among the most curable of diseases, if taken in its early stages; but tubercular disease of the cerebral pia-mater, must still be included in the list of lethal diseases, and is a fruitful source of infantile mortality in this city.

The deep interest Your Excellency and the Countess of Aberdeen have ever manifested in the social welfare of the people is our excuse for drawing attention to these matters; but we would fain direct Your Excellency's attention to the brighter side of the picture.

Asepsis has practically revolutionised surgical practice within the past twenty years, and made possible, abdominal and cerebral operations, which for centuries had been considered almost criminal to attempt.

Next in importance to asepsis is the discovery of the properties of the Röntgen X-Rays, the value of which both as a therapeutic and diagnostic agent it is difficult to over-estimate.

The Finzen light apparatus, in which Her Gracious Majesty has shown such an interest, has proven its value as a curative remedy, and will no doubt become more generally useful when its powers are better understood.

In the advance of scientific medicine the Dublin School has borne its full share, and has shown an appreciative sympathy with the progress of the profession in Foreign countries.

The marked improvement in our hospitals during the past twenty years, was made possible by the liberal subscriptions and donations of our people, and not less so by the self-denial and

generous money grants for scientific instruments and appliances, of the Medical Staff. It would be ungenerous not to recognise the enthusiasm for progress in medicine that actuates the profession in our city.

The various statistical and other tables appended will be found similar in character to those that hitherto appeared in regular annual sequence, but at the same time indicative of the relative changes and results in the different institutions.

On the 1st April, 1906, there were 957 patients in the Hospitals under the supervision of our Board.

The number admitted during the year was 11,601, making the whole number under treatment 12,226, of whom 11,052 left the wards either cured or relieved, or were discharged for other causes, and 469 died.

1,037 patients remained under treatment in these hospitals on the 31st March, 1906.

Exclusive of incurables, the mortality was 3·74 per cent. on those treated to a termination.

The total daily average number of beds occupied in these hospitals throughout the year was 940·02.

The time spent in hospital by each patient under treatment (omitting the patients in the Royal Hospital for Incurables) averaged 23·74 days.

Appendix.—Table No. 1 shows a list of diseases of patients treated in the several hospitals and the number that died of each disease during the year ended 31st March, 1906.

Table No. 2 shows the average cost per bed occupied throughout the year ended 31st March, 1906, for maintenance and for establishment, and for both, exclusive of buildings and furniture.

Table No. 3 shows the several sources of income of each hospital.

Table No. 4 sets forth in detail the chief heads of expenditure of each hospital.

Table No. 5 gives the number of patients treated in each hospital, the mortality per cent., the average daily number of beds occupied during the year, and the present extent of accommodation for each class of patients.

Table No. 6 shows the prices of articles supplied to each hospital per contract or otherwise.

Table No. 7 gives the various dietaries in use in each hospital.

Table No. 8 gives the names of the Governors of each hospital, and number of attendances during the year.

### THE LOCK HOSPITAL.

This hospital was established for the exclusive treatment of venereal disease, and materially differs from the general clinical hospitals, in being maintained rather as a protection to the Naval

and military services, and the public generally, than as an institution for the relief of the sick poor, or as a centre of clinical instruction. This principle is established by the fact that Lock Hospitals throughout the kingdom are, as a rule, subsidised by the State, and that this particular hospital has received a grant from the War Office.

We visited the several departments and found everything in good order. The food was excellent, well cooked, and served according to regulation.

We visited the patients and gave them every opportunity of telling their wants and such complaints as they might possibly have, and we noticed with pleasure, that, without exception, they one and all spoke gratefully of the care and consideration bestowed on them.

We learned with regret that patients too frequently defer seeking admission until the disease has become aggravated or confirmed by delay and neglect; and unfortunately they too frequently demand their discharge incompletely cured.

This subject merits the most serious consideration of the authorities, and it has been suggested, with a view to prevent the spread of disease, that provision should be made for the detention of patients until their cure is completed. We have given this suggestion our best attention, and we are of opinion that such a power would be of doubtful benefit. It would act as a deterrent to patients eligible for admission to hospital, except those driven to do so by pain, misery, or disfigurement.

Of the general management of the institution we have but to repeat what we have said in former reports of the zeal and ability of the Governors, who succeed in securing efficiency with economy.

To manage the neurotic patients that form the majority of those admitted to the hospital, and to maintain discipline among them, calls for great tact and an exceptional knowledge of human nature; these gifts the Matron possesses in full measure; with the result that the harmonious working of the hospital is ensured.

We have been informed that one patient was discharged during the past year for insubordination, and no applicant affected with syphilis was refused admission.

We ascertained that the Registrar orders the provisions, which are received by the Matron, who vouches that the quality and weight are correct; the daily supply is then sent to each department.

We examined the account books, which we found carefully and accurately written up to date.

On the 1st April, 1905, 71 patients remained in hospital; 482 were admitted during the year; 479 were discharged; 8 died; and 66 remained at the end of the year.

The mortality was 1·64 per cent. on the total treated to a termination.

The time spent in hospital by each patient averaged 39·16 days, and the daily number of beds occupied averaged 62·60 days.

STEEVENS' HOSPITAL.

On the occasion of our inspection we found order, regularity and cleanliness prevailing throughout the hospital. The food was of good quality, well cooked and properly served. The Lady Superintendent continues to give valuable and assiduous attention to her duties, and we were informed that the nurses were kind, competent and sympathetic.

The clinical teaching and the treatment of the patients is marked by high professional ability.

We ascertained that ample and suitable provision is made for isolating noisy and delirious patients, and those affected by septic conditions, certain lung diseases, or offensive cases, likely to contaminate the air of a general ward.

We were much pleased with the open air verandah which has been recently constructed on the sunny side of the hospital; it is roomy and well designed, and should prove a great acquisition in promoting the convalescence of patients.

The Governors of the hospital, we are informed, purpose providing a commodious apartment for the reception of accident cases, which is to take the place of the room now used for that purpose.

The introduction of the Röntgen X-Rays and the Finsen apparatus has greatly contributed to the usefulness of the institution, and their application has been attended with signal success.

The operating theatre, spacious, well lighted, and thoroughly ventilated, is admirably adapted for its purposes. It is equipped with apparatus of the most modern pattern for the heating of the apartment and for the sterilising of instruments, dressings, towelling and water.

We have frequently drawn attention to the vital importance of having the atmosphere of an operating theatre pure, for surgical wounds once infected by foul air, counteract the utmost skill of the surgeon and defeat the best efforts for the patient's recovery.

As in other hospitals, we did not fail to inquire into the details of ward management—to ascertain that the ventilation and heating arrangements were efficient, that the floors were kept clean, and that there was a proper interval between each bed.

We examined the linen to see that it was properly washed and well aired, and the presses in which it was stored, and the linen book to see that a proper inventory was kept of the several articles.

We inspected the closets, lavatories, baths and sinks, and saw that proper provision was made for the prompt removal of old dressings and excreta from the wards, and that the spit cups and ward utensils were suitable.

On the 1st April, 1905, 109 remained in hospital; 1,196 were admitted during the year; 1,134 were discharged; 49 died; and 122 remained at the close of the year.

The mortality was 4.14 per cent. on the total treated to a termination.

The time spent in Hospital by each patient averaged 24·69 days; and the daily number of beds occupied averaged 102·20.

#### THE MEATH HOSPITAL.

The Meath Hospital, opened in Meath-street, in the Liberties, in 1753, in the midst of a dense and industrious population of French Huguenots, was finally in 1816 removed to its present site. A new building was erected in that year, which, however, was not completed until 1822. The expense of the undertaking was principally defrayed by the Grand Jury of the County of Dublin, who granted a sum of £4,788, and made the hospital the infirmary for the county. The old hospital has been transformed almost beyond recognition, fresh buildings have been added, the Barber Wing in 1889, and the detached fever house in 1896; and both in the old and new buildings the exacting requirements of modern hospital construction have been complied with.

The impression left on our minds after inspecting the hospital was favourable, and we consider that its management is conducted in an enlightened and progressive manner.

The nursing arrangements under the Lady Superintendent are well carried out, and the patients whom we interrogated as to the care and attention bestowed on them invariably gave satisfactory replies.

We ascertained that for cases of emergency due to poisoning, the suitable antidotes and necessary apparatus are kept in readiness.

A nurses' home is being built, but it is not sufficiently advanced towards completion to allow of our expressing any opinion on its suitability.

The clinical work is, as it has always been, of a high order, and we desire again to express our appreciation of the eminence of the teaching staff, who are devoted to the interests of the institution.

The domestic arrangements of the hospital call for hearty approval, the supplies are of good quality, the arrangements for the preparation of the food excellent, and the system of book-keeping clear, intelligent, quickly understood, reflects great credit on the Secretary.

There were 109 patients in this hospital at the commencement of the year; 1,294 were admitted; 1,188 discharged; and 90 died (of whom 10 were moribund on admission); and 125 remained on the 31st March, 1906.

The mortality was 7·04 per cent. on the total number treated to a termination.

The time spent in hospital by each patient averaged 27·56 days; and the average daily number of beds occupied during the year was 103·45.

#### CORK STREET FEVER HOSPITAL.

For the last few years the pressure on the accommodation in this hospital has not been excessive, consequently there has been ample space available for the reception of patients.

Public safety requires that there should be a considerable number of beds ready to meet the fluctuation of epidemics, such as measles, scarlatina, diphtheria, &c., which should be removed from the over-crowded, ill-ventilated tenements of the poor without any unnecessary delay.

We examined the several departments of the institution and found them, especially the wards and corridors, clean, warm, and well ventilated. The bed linen, however, appeared discoloured, as if it had been imperfectly washed; we were, however, informed that the discolouration was due to the use of the Poddle river water in the laundry. We strongly recommend the substitution of the Vartry water in lieu of this supply, and we would suggest that economy be practised in some other direction. Sheets washed in water so deeply impregnated with organic matter are unsuitable for hospital use.

The arrangements made for the segregation of typhus fever and other highly infectious diseases in separate wards, and in detached houses, each of which is practically provided with its own nursing staff, are perfectly carried out and reflect credit on the management.

The Resident Medical Officer, Dr. M. Day, devotes himself with unceasing attention to the administration of the hospital, and the several articles of diet and the method of cooking the food was satisfactory.

We were much pleased with the arrangement and order in which the Matron kept the stores, under lock and key, so that nothing should be lost or wasted.

There were 133 patients in the hospital at the commencement of the year; 1,565 were admitted; 1,400 were discharged; 110 died; and 128 remained on the 31st March last.

The mortality was 7.00 per cent. on the total number treated to a termination in the hospital.

The time spent in hospital by each patient averaged 25.14 days, and the average daily number of beds occupied during the year was 128.32.

#### THE HOUSE OF INDUSTRY HOSPITALS.

This institution comprises the Hardwicke, Whitworth and Richmond Hospitals. It is under the management of a Board of Governors appointed by the Lord Lieutenant in a manner similar to that of the Westmoreland Lock Hospital.

On the day of inspection we were much pleased by the order and cleanliness we found to prevail throughout the wards and other departments.

The nursing arrangements are carried out under the Lady Superintendent with an efficiency and zeal which merit much praise.

We found the rations of good quality, and the kitchen accommodation and cooking arrangements excellent.

The steam laundry, with its modern machinery and sterilizer, which are isolated from the hospital, is all that can be desired.

We are of opinion that the *post-mortem* and pathological departments are sufficiently removed from the wards to obviate

any deleterious effects from them. Scientific investigations are carried on in these departments by the Pathologist, Dr. Earl, a large class of students availing themselves of his valuable instructions.

The Governors, at our recommendation, have shown great judgment and liberality in constructing in the Whitworth Hospital, during the past year, a well-equipped bacteriological laboratory, wherein morbid secretions are examined, and the diagnosis of doubtful zymotic diseases is demonstrated by the most modern and approved methods.

Adjoining this department we observed with great interest a number of patients undergoing treatment by inoculations of vaccine, controlled by the observation of the opsonic index according to Professor Wright's method. The patients were the subjects of tubercular pneumococcus and staphylococcus, and the administration of the corresponding vaccines was attended with most satisfactory results.

The cases treated included tubercular disease of the glands, ulcers, lupus, unresolved pneumonia, pustular acne, &c., &c.

In examining the Registries we were much pleased with the system of accounts and tabulated summaries of average cost per patient, both for maintenance and establishment, and also for servants and nurses. This arrangement enables the Governors to check the various expenditures at each meeting of the Board, and reflects much credit on the Secretary, who is indefatigable in the discharge of his duties.

#### HARDWICKE HOSPITAL.

Twenty-six patients remained in this hospital on 1st April, 1905; 567 were admitted during the year; 490 were discharged; 50 died, giving a mortality of 9.25 per cent. on the total number of cases treated to a termination.

The average daily number of beds occupied during the year was 33.51, and the time spent in hospital by each patient averaged 30.62 days.

#### WHITWORTH HOSPITAL.

On the 1st April, 1905, 56 patients remained in hospital; 593 were admitted; 543 were discharged; 46 died, giving a mortality of 7.80 per cent. on the total number of cases treated to a termination.

The average daily number of beds occupied throughout the year was 44.06, and the time spent in hospital by each patient averaged 24.18 days.

#### RICHMOND HOSPITAL.

There were 76 patients in this hospital when the year commenced; 940 were admitted 888 were discharged; 45 died, giving a mortality of 4.82 on 933 cases treated to a termination.

The average daily number of beds occupied in the year was 67.91, and the time spent in hospital by each patient averaged 20.29 days.

#### ROTUNDA LYING-IN HOSPITAL.

On inspection we found the hospital buildings in good order, the wards and corridors beautifully clean; the drainage efficient and well looked after, and the patients carefully and skilfully attended to.

Owing to the increase in the number of patients during the past three or four years and the consequent congestion in the maternity wards, the Governors decided on the erection of an additional wing or suite of apartments to relieve the congestion and to allow of the thorough disinfection of each ward in rotation.

We notice with pleasure that the old beds are being gradually replaced by modern ones, which are provided with detachable coats for the babies.

During the past year a large number of patients were admitted to the auxiliary hospital for diseases peculiar to women.

The clinical instruction afforded is marked by high professional ability, and accordingly attracts large numbers of students from all parts of the world.

Under the experienced Lady Superintendent the nursing staff has attained to a high standard of efficiency and their duties are carried out skilfully and sympathetically.

The account books appeared to be carefully and accurately kept, and the returns testify as to the care bestowed in the disbursements of all funds.

On the 1st April, 1905, there were 55 patients in the labour wards; 2,226 were admitted during the year; 2,215 were discharged; 321 were discharged not having been delivered; 7 died; and 59 remained in the hospital at the end of the year.

Twenty-eight patients remained in the auxiliary or chronic department on the 1st April, 1905; 403 were admitted; 398 discharged; 5 died in the year ended 31st March last; and 28 then remained.

The average daily number of beds occupied by labour patients throughout the year was 52.22, and that of the chronic class was 29.87.

The time spent in hospital by labour cases averaged 9.63 days, and that by the chronic class 22.43 days.

The mortality in the labour wards, deducting non-parturient cases, was 0.35 per cent., and that by the chronic class 1.25 per cent.

#### THE COOMBE LYING-IN HOSPITAL.

This hospital, situated on the site of the old Meath Hospital in the Liberties, is surrounded by a large and very poor population.

It was founded in 1826, in which year a poor woman, resident in the district, died on her way to the Rotunda Lying-in Hospital. Her case excited the sympathy of the citizens, and a sum sufficient to open a hospital in the district was quickly subscribed. Since then, principally through the generosity of Lord Ardilaun and others, the building has been greatly enlarged.

Within the last few years it has been brought into a state of great efficiency, and bears evidence of being conducted with much administrative ability. On inspection the wards presented a cheerful appearance, were scrupulously clean, warm, and well ventilated. The beds and bedding were properly looked after, the linen was well washed and aired.

There can be no doubt that the patients are in every respect well cared, and derive all the advantages that can be conferred on them by skilful medical and surgical treatment. We were informed that the blankets are invariably removed for purification previous to being re-issued to a new case on admission. This arrangement is of the utmost importance, as all woollen fabrics saturated with decomposed or organic emanations are likely to be injurious to parturient women, or to surgical wounds.

The out-door department, which has been for many years a prominent feature of this hospital continues to merit favourable notice. The practice of assigning students to attend (in company with a qualified assistant) on women in child-bed at their own homes, is for many reasons judicious, and an important means of affording valuable instruction.

The medical and nursing staffs are, as the reports show, both zealous and efficient, and the low death-rate of the institution abundantly demonstrates the individual care bestowed on the patients and the aseptic condition of the obstetrical and gynaecological wards.

Owing to the illness of the Registrar we were unable to examine the financial accounts; but on all former occasions we found them well and carefully kept, and we were informed that they are regularly checked by the Managing Committee at their monthly meetings.

Sixteen labour cases remained in hospital on the 1st April 1905; 615 were admitted during the year; 608 were discharged; 2 died; and 21 remained at the close of the year.

Seventeen patients remained in the chronic wards on the 1st April, 1905; 288 were admitted; 284 were discharged; 3 died; and 18 remained at the end of the year.

The average daily number of beds occupied during the year by labour cases was 16.90, and that by chronic cases 15.40.

The time spent in hospital by labour patients averaged 10.69 days, and that by the chronic cases 23.82 days.

The mortality of patients admitted to the labour wards (deducting 80 that were discharged not having been delivered), was 2 deaths in 530 cases, or 0.37 per cent., and for the chronic cases 3 deaths, giving a mortality of 1.04 per cent.

#### THE ROYAL VICTORIA EYE AND EAR HOSPITAL.

St. Mark's and the National Eye and Ear Hospitals have within the last few years been amalgamated, and now constitute the "Royal Victoria Eye and Ear Hospital," and the former buildings have been replaced by a commodious, healthily-situated

hospital, constructed in accordance with modern hygienic views, and is, as its success proves, admirably adapted for the purpose for which it was built.

The wards, day-rooms, and the culinary department are very satisfactory, and we cannot but regret that the example of providing day-rooms is not followed by the general hospitals of our city; day-rooms do much to keep the dormitory wards sweet, and they allow of convalescing patients spending their days in a purer and sweeter atmosphere. It is contrary to hygienic principles to have such patients eating and living surrounded by patients confined to bed who are vitiating the air by their respiratory function, and by the emanations incidental to their sickness, and are in turn labouring under the disadvantage of having their breathing space crowded with their convalescent patients and further vitiated by the food smells, &c.

We are glad to say the Council of the hospital propose to erect a suitable out-patient building on the ground floor at the rear of the main building, which will obviate the necessity for using the hospital basement for extern patients, as is done at present; than which nothing can be more out of keeping with the principle of sanitation.

The benefits of this hospital are available for persons who, though unable to support themselves in lodgings whilst under medical treatment, can, nevertheless, contribute something towards their support as in-patients.

By arrangement with the authorities, the Royal Irish Constabulary are admitted as pay-patients.

Boards of Poor Law Guardians are entitled to send patients, who may be suffering from eye or ear diseases, to the hospital, on paying a sum sufficient to reimburse the institution for the outlay.

The nursing arrangements under the care of the experienced Lady Superintendent are judicious and efficient.

We have no doubt that the hospital will continue to be conducted with efficiency, and that the well-deserved reputation of the Medical Staff for clinical teaching will be upheld and increased owing to the greater facilities they now possess.

On the 1st April, 1905, 53 patients were in hospital; 1,368 were admitted during the year; 1,354 were discharged; and 63 then remained.

The average daily number of beds occupied during the year was 76, and the time spent in hospital by each patient averaged 20·69 days.

The mortality was 0·29 on those treated to a termination.

#### THE ROYAL HOSPITAL FOR INCURABLES.

The Governors of this great hospital are entitled to the utmost credit for the untiring energy they have shown in its management and maintenance. They have gained for it the confidence of all classes; as is demonstrated by the large measure of support it enjoys.

On inspection we found all the departments of the hospital in a most creditable order, and had the pleasing evidence that every thing which human skill, kindness, and sympathy can effect is provided to alleviate the sufferings of the patients.

The wards and corridors are bright and spacious; their brightness being enhanced by light and tasteful colouring. All the apartments are adequately furnished, and the requirements of the infirm and helpless are liberally provided for by easy chairs, lounges, and sofas.

We found the culinary arrangements to be excellent. We may add that the returns and vouchers in connection with the expenditure of the hospital are carefully and accurately kept, which reflects great credit on the Registrar.

The grave character of the cases admitted is indicated by the high mortality.

Two hundred and eight patients remained in hospital on the 1st April, 1905; 64 were admitted; 11 resigned; 50 died during the year; and 211 remained at the close of the year.

The mortality was 81.96 per cent. on the total number of cases treated to a termination.

The time spent in hospital by each patient averaged 290.72 days.

The average daily number of beds occupied throughout the year was 207.58.

We have the honour to be

Your Excellency's obedient, faithful servants,

FRANCIS W. BRADY, BART., *Chairman.*  
ARDILAUN.

JOHN E. BARRY, KNT.

MATERNITY HOSPITAL.

Low Diet.—2 pints hot Milk, 1 pint Gruel, 1 pint Broth. Tea, Bread, & sufficiency, Beef Tea, Eggs, or other extras when ordered.

Full Diet.—6 oz. meat in place of Broth.

For Beef Tea we allow  $\frac{1}{2}$  lb. beef to 1 pint water. For Broth—Stock with barley, oatmeal, Herbs, &c. For Gruel—To 7 pints Milk, 1 lb. Oatmeal, 4 oz. Sugar, and a little Ginger. Tea, 1 oz. for 6 patients.

Each patient on admission shall be placed on Low Diet, until the proper Diet is ordered, or by the Physicians. No extra shall be given, unless on the order of the Master or Assistants, nor re-issued unless the order therefor is initiated on the Diet Sheet by the Physician at his regular visit.

## COOMBE LYING-IN HOSPITAL.

No Extras allowed unless ordered each day and initialed by one of the Medical Officers.

Appendix.

No. 7.

Dietaries.

DAYS.	Breakfast.	Dinner and Luncheon.	Supper.
No. 1.	Tea, 1 pint. Bread, 4 oz.	Luncheon—Milk, $\frac{1}{2}$ pint. Meat, $\frac{1}{2}$ lb.; bread, 4 oz.; ox head soup, 1 pint.	Tea, 1 pint; bread, 4 oz. Supper—Milk, $\frac{1}{2}$ pint, or gruel, 1 pint.
No. 2.	Tea, 1 pint. Bread, 4 oz.	Luncheon—Milk, $\frac{1}{2}$ pint. Ox-head soup, 1 pint; bread, 4 oz.; whey, 1 pint, 4 o'clock.	Tea, 1 pint; bread, 4 oz. Supper—Gruel, 1 pint, con- tains $\frac{1}{2}$ pint milk
No. 3.	Tea, 1 pint. Bread, 4 oz.	Luncheon—Milk, 1 pint. Special beef tea, 1 pint; whey or milk, 1 pint, 4 o'clock.	Tea, 1 pint; bread, 4 oz. Supper—Milk, 1 pint.
No. 4.	SLOP DIET IN 24 HOURS:—		
		Special beef tea, . . . . . 2 pints.	
		Milk, . . . . . 6 pints.	

Breakfast, 7.30 A.M.; Luncheon, 11 A.M.; Dinner, 1 P.M.; Tea, 5 and 6 P.M.; Supper, 8.30 P.M.

## EXTRAS AND STIMULANTS AS ORDERED IN ALL DIETS.

Tea,  $\frac{1}{2}$  lb.; sugar, 1 lb.; milk, 2 pints—supplies 15 patients for 24 hours.  
 Bread, 2 lbs. loaf—6 lbs. supplies 3 patients for 24 hours.  
 Ox-head broth— $\frac{1}{2}$  ox-head for broth, thickened with barley and dried vegetables, for  
 10 patients.  
 Special beef tea—gravy beef,  $\frac{1}{2}$  lb. to 1 pint.  
 Whey—milk,  $\frac{1}{2}$  pint, and buttermilk,  $\frac{1}{2}$  pint, to make 1 pint.  
 Gruel—oatmeal, 1 oz., to milk,  $\frac{1}{2}$  pint, for 1 pint.

## ROYAL VICTORIA EYE AND EAR HOSPITAL.

Breakfast.	Dinner.	Supper.
Bread and Butter, 8 oz.	On Sunday and Wednesday—Roast mutton, with vegetables (parsnips or cabbage), and potatoes.	Bread and butter.
Tea, with Milk and Sugar, 1 pint.	On Monday and Saturday—Roast beef or stewed beef occasionally with soup, vegetables, and potatoes.  On Tuesday—Boiled bacon and cab- bage and potatoes.  On Thursday—Roast beef, with potatoes and turnips.  On Friday—Fish and potatoes.  Bread each day as required; many of the patients do not care to take any.	Tea, with milk and sugar.

Breakfast at 8 o'clock, A.M.; dinner at 1.30 o'clock, P.M.; supper at 8.30 o'clock, P.M.

Eggs and extra Milk, Beef Tea, &c., supplied when necessary, if the patient is debilitated  
 or too old or too young for the ordinary diet.  
 The system of preparing a set diet for each patient was abandoned some years ago, as it  
 was found to result in a good deal of waste. Now each patient gets as much as he or she  
 cares to eat, and there is practically no waste at meals.

Members of House Committee.

No 12579.

DUBLIN CASTLE,  
18th June, 1906.

SIR,

I have to acknowledge the receipt of your letter of the 11th instant, forwarding, for submission to Their Excellencies the Lords Justices, the Forty-eighth Annual Report of the Board of Superintendence of the Dublin Hospitals, with Appendices, for the year 1905-1906.

I am,

Sir,

Your obedient Servant,

J. R. DOUGHERTY.

The Secretary,  
Board of Superintendence of  
Dublin Hospitals,  
35, Dawson-street,  
Dublin.
